## Natural History

Am Parakeet parakeets are native to Australia. They live in a variety of habitats, including forests, grasslands, and deserts. They are social birds and live in flocks of up to 100 individuals.

Am Parakeet parakeets are sexually dimorphic, meaning that males and females have different physical characteristics. Males are typically brighter in color than females and have a longer tail. Females are typically more docile than males.

## **Appearance**

Am Parakeet parakeets are small birds, with an average length of 10-12 inches. They have a long tail and short, rounded wings. Their plumage is typically green, with blue and yellow accents. However, there are also a number of color mutations available, including blue, yellow, white, and pied.

## **Behavior**

Am Parakeet parakeets are active and playful birds. They are very social and enjoy interacting with their owners. They are also known for their ability to mimic sounds, including human speech.

Am Parakeet parakeets can be territorial, especially during breeding season. They may also become aggressive towards other birds, including their own flock mates. It is important to provide your Am Parakeet parakeet with plenty of space and toys to help reduce aggression.

## **Diet**

Am Parakeet parakeets are omnivores and their diet consists of a variety of seeds, fruits, and vegetables. A good quality commercial birdseed mix is a good foundation for your Am Parakeet parakeet's diet. You should also offer your bird a variety of fresh fruits and vegetables, such as apples, bananas, carrots, and spinach.

It is important to avoid feeding your Am Parakeet parakeet avocados, chocolate, and onions, as these foods can be toxic to birds.

## **Housing**

Am Parakeet parakeets need a spacious cage that is at least 18 inches long, 18 inches wide, and 24 inches high. The cage should be made of sturdy materials, such as stainless steel or wrought iron. It should also have a variety of perches, toys, and a food and water dish.

You should place your Am Parakeet parakeet's cage in a quiet area of your home where it will not be disturbed. The cage should also be placed in a well-lit area, but out of direct sunlight.

## **Health Care**

Am Parakeet parakeets are generally healthy birds, but they can be susceptible to a number of diseases, including:

- Psittacine beak and feather disease (PBFD)
- Feather plucking
- Respiratory infections
- Diarrhea
- Parasitic infections

It is important to take your Am Parakeet parakeet to a veterinarian for regular checkups. Your veterinarian can help you prevent and treat any health problems that may arise.

## **Training**

Am Parakeet parakeets are intelligent birds that can be trained to do a variety of tricks. Training your Am Parakeet parakeet can help you bond with your bird and provide it with mental stimulation.

You can start training your Am Parakeet parakeet when it is about 6 months old. Start with simple tricks, such as teaching your bird to step up onto your finger or to say its name. As your bird becomes more comfortable with training, you can move on to more complex tricks, such as teaching it to fly to you or to fetch objects.

Am Parakeet parakeets make great pets for children of all ages. They are small, colorful, and relatively easy to care for. With proper care, your Am Parakeet parakeet can live for 10-15 years.

If you are thinking about getting an Am Parakeet parakeet, be sure to do your research and learn about their specific needs. This guide will provide you with all the information you need to know to keep your Am Parakeet parakeet healthy and happy.
