

# Sister Sarah Pick Classification Follow Ups Chart: A Comprehensive Guide

The Sister Sarah Pick Classification Follow Ups Chart is a valuable tool for nurses to use when assessing and caring for patients with pressure injuries. It is a comprehensive chart that provides a standardized way to assess the severity of pressure injuries and track their progress over time. This information can be used to develop and implement appropriate treatment plans and to evaluate the effectiveness of those plans.

The Sister Sarah Pick Classification Follow Ups Chart is a two-page document. The first page contains the assessment form, which is used to assess the severity of a pressure injury. The second page contains the follow-up form, which is used to track the progress of the pressure injury over time.

To use the assessment form, first identify the location of the pressure injury. Then, assess the size, depth, and appearance of the injury. The size of the injury is measured in centimeters, and the depth is measured in millimeters. The appearance of the injury is described using a variety of terms, such as "erythema," "edema," and "necrosis."

Once the pressure injury has been assessed, the nurse can use the follow-up form to track its progress over time. The follow-up form includes a variety of information, such as the date of the assessment, the size of the injury, the depth of the injury, and the appearance of the injury. This information can be used to track the progress of the pressure injury and to evaluate the effectiveness of the treatment plan.

There are many benefits to using the Sister Sarah Pick Classification Follow Ups Chart. Some of the benefits include:

- **Standardizes the assessment of pressure injuries.** The chart provides a standardized way to assess the severity of pressure injuries. This ensures that all nurses are using the same criteria to assess pressure injuries, which improves the accuracy and consistency of the assessments.
- **Tracks the progress of pressure injuries over time.** The chart allows nurses to track the progress of pressure injuries over time. This information can be used to evaluate the effectiveness of the treatment plan and to make necessary adjustments.
- **Provides a basis for developing treatment plans.** The chart can be used to develop treatment plans for pressure injuries. The information

on the chart can be used to identify the goals of treatment and to select the appropriate interventions.

- **Facilitates communication between healthcare professionals.** The chart can be used to facilitate communication between healthcare professionals. The standardized assessment and follow-up forms allow nurses, doctors, and other healthcare professionals to easily share information about pressure injuries.

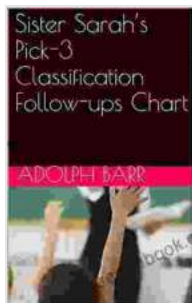

There are some limitations to the Sister Sarah Pick Classification Follow Ups Chart. Some of the limitations include:

- **The chart is not always accurate.** The chart is based on a subjective assessment of the pressure injury. This means that the accuracy of the assessment can be affected by the experience and training of the nurse.
- **The chart is not always complete.** The chart does not include all of the information that may be needed to assess a pressure injury. For example, the chart does not include information about the patient's medical history or the patient's current medications.
- **The chart is not always easy to use.** The chart can be complex and difficult to use. This can make it difficult for nurses to use the chart consistently and accurately.

The Sister Sarah Pick Classification Follow Ups Chart is a valuable tool for nurses to use when assessing and caring for patients with pressure injuries. The chart can be used to standardize the assessment of pressure injuries, track their progress over time, and develop treatment plans.

However, the chart has some limitations, including the fact that it is not always accurate, complete, or easy to use.

Despite its limitations, the Sister Sarah Pick Classification Follow Ups Chart is a valuable tool that can help nurses to improve the care of patients with pressure injuries.
