

# Urbanization and Growth: Commission on Growth and Development

The Commission on Growth and Development was established in 1997 by President Bill Clinton to examine the challenges and opportunities facing the United States as a result of urbanization and population growth. The commission was chaired by former Vice President Al Gore and included a diverse group of experts from the fields of economics, urban planning, environmental science, and social policy.

The commission's report, issued in 2000, made a number of recommendations to promote sustainable growth and development. These recommendations included:

- \* Investing in infrastructure, education, and other public goods
- \* Promoting economic development in rural areas
- \* Protecting the environment
- \* Ensuring that all Americans have access to affordable housing

The commission's report has been influential in shaping urban policy in the United States. Many of the commission's recommendations have been adopted by federal, state, and local governments.

### **Urbanization and Growth: The Challenges**

Urbanization is a global trend that is expected to continue in the coming decades. By 2050, it is estimated that two-thirds of the world's population will live in urban areas. This rapid growth is putting a strain on infrastructure, housing, and other public resources.

In the United States, urbanization is most pronounced in the Sun Belt states of the South and West. These states are attracting new residents from other parts of the country and from abroad. The influx of new residents is putting a strain on housing, transportation, and other public services.

Rapid urbanization can also lead to environmental problems, such as air pollution, water pollution, and solid waste disposal. Urban areas are often densely populated, which can lead to traffic congestion, noise pollution, and other quality-of-life issues.

### **Urbanization and Growth: The Opportunities**

While urbanization presents a number of challenges, it also offers a number of opportunities. Urban areas are often centers of economic growth and innovation. They offer a variety of job opportunities and educational opportunities. Urban areas also offer a diverse range of cultural and entertainment options.

Urbanization can also lead to environmental benefits. Urban areas are often more energy-efficient than rural areas. They also have a smaller environmental footprint, as they require less land and resources.

## **Promoting Sustainable Growth and Development**

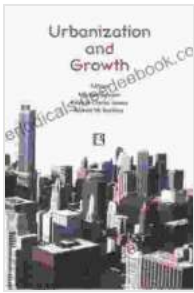

The challenge facing policymakers is how to promote sustainable growth and development in urban areas. This requires a balanced approach that addresses both the challenges and opportunities of urbanization.

Some of the key strategies for promoting sustainable growth and development in urban areas include:

- \* Investing in infrastructure, such as transportation, housing, and water and sewer systems
- \* Promoting economic development in both urban and rural areas
- \* Protecting the environment
- \* Ensuring that all Americans have access to affordable housing
- \* Encouraging community involvement in planning and decision-making

By implementing these strategies, policymakers can help to create more sustainable and livable urban communities.

Urbanization is a global trend that is reshaping the way we live, work, and play. The Commission on Growth and Development made a number of recommendations to promote sustainable growth and development in urban areas. These recommendations have been influential in shaping urban policy in the United States. By implementing these strategies, policymakers can help to create more sustainable and livable urban communities.
